Title :	Regulations for Allocating and Governing Telecommunications Numbers Ch
Date :	2020.07.01
Legislative :	1.Promulgated on July 1, 2020
Content :	<p>Chapter One General Provisions</p> <p>Article 1</p> <p>These Regulations are enacted in accordance with the provisions of Paragraph 2, Article 69 of the Telecommunications Management Act (hereinafter referred to as the Act) .</p> <p>Article 2</p> <p>The terms used in these regulations are defined as follows :</p> <ol style="list-style-type: none">1. Telecommunications number: It refers to the number required to maintain the normal operations, such as intercommunication, identification, exchange and control of the public telecommunications network, including coding, identification code and subscriber number.2. Coding: It refers to the telecommunications number used to control the routing and exchange of information of the public telecommunication network.3. Identification code: It refers to the telecommunications number used to identify the network, route or service within the public telecommunications network.4. Subscriber number: It refers to the telecommunications number used to provide a subscriber with telecommunications services.5. Golden number: It refers to an easy-to-remember subscriber number or a subscriber number of certain arrangement rules or with special meaning. <p>Article 3</p> <p>Telecommunications numbers are classified as follows :</p> <ol style="list-style-type: none">1. Coding :<ol style="list-style-type: none">(1) Signaling point code(2) Number portability code(3) Mobile network code(4) Other system internal code2. Identification code :<ol style="list-style-type: none">(1) IDD identification number(2) Pre-selection override code(3) Area code(4) Special telecommunications number3. Subscriber number :<ol style="list-style-type: none">(1) Local line phone number(2) Mobile phone number(3) Satellite communication number(4) Internet phone number(5) Intelligent virtual number(6) IoT number <p>Article 4</p> <p>The format of telecommunications numbers is shown in Annex 1.</p> <p>Annex 1 Format of Telecommunications Number.pdf</p> <p>Article 5</p> <p>Those which apply for the allocation of identification codes to establish public telecommunication networks, signaling point codes, or subscriber numbers shall first conduct telecommunications enterprise registration with the competent authority in accordance with the provisions of Article 5 of the Act.</p> <p>Article 6</p> <p>If one of the following situations occurs, the application will not be accepted :</p> <ol style="list-style-type: none">1. Those which do not comply with the provisions of Article 5.

2. The telecommunications enterprise' s business suspended or terminated.
3. The documents that should be submitted are incomplete or the content that should be stated is incomplete, and the corrections are not made or still incomplete after being notified by the competent authority to make correction within a time limit.

Chapter Two Application for Allocation of Telecommunications Numbers

Section One Application for allocation of coding

Article 7

When a telecommunications enterprise applies to the competent authority for the allocation of signaling point codes, it should submit the following documents: :

1. Telecommunications Number Application Form
2. Signaling point code use plan (including the expected location of the network' s point of interface interconnected with other public telecommunications networks, and its signal method, network architecture and capacity planning data)
3. Other materials designated by the competent authority

Article 8

The competent authority should consider the following matters when reviewing the application for signaling point code allocation prescribed in the previous article :

1. Whether the type of the applied telecommunication numbers is necessary to provide services
2. Whether it specifies the expected location of the network' s point of interface interconnected with other public telecommunications networks
3. Whether the signal mode meets the requirements of the Signaling System No. 7 network
4. Whether it specifies the connection structure of the signaling point code switch inside the network and the connection structure with other telecommunications networks
5. Whether it specifies the brand, model, quantity, capacity and function of the signaling point code switch

Article 9

Each of the telecommunication enterprise' s application for the allocation of the international signaling point code of the Signaling System No. 7 network is limited to one point code, and that of the national signaling point code of the Signaling System No. 7 network is at least one point code.

Article 10

Coding other than signaling point codes should be reported to the competent authority for reference prior to use.

The number use plan should be submitted when reporting for reference.

Section Two Application for allocation of identification codes

Article 11

When a telecommunications enterprise applies to the competent authority for the allocation of identification codes, it should submit the following documents :

1. Telecommunications Number Application Form
2. Identification code use plan (including the expected location of the network' s point of interface interconnected with other public telecommunications networks, and its network architecture and capacity planning data)
3. Other materials designated by the competent authority

Article 12

The competent authority should consider the following matters when reviewing the application for identification code allocation prescribed in the previous article :

1. Whether the type of the applied telecommunication numbers is necessary to provide services
2. Whether it specifies the expected location of the network' s point of interface interconnected with other public telecommunications networks
3. Whether it specifies the connection structure of the switch within the network and the connection structure with other telecommunications networks
4. Whether it specifies the brand, model, quantity, capacity and function of the switch

Article 13

Each of the telecommunication enterprise' s application for the allocation of the identification code is limited to one identification code.

Section Three Application for allocation of special telecommunications numbers

Article 14

A government agency (organization) , public welfare association, foundation, independent administrative institution or public enterprise for the need of providing emergency rescue services, public affair counseling services, public rescue services or charity services, etc., may apply to the competent agency for the allocation of special telecommunications numbers, after the approval by the national competent authority for business objectives or the superior authority by reviewing their statutory duties, establishment purposes, public welfare needs, etc.

The public utilities mentioned in the preceding paragraph refer to the following :

1. Electricity enterprises
2. Water supply enterprises
3. Public utilities recognized by the competent authority or the national competent authorities for business objectives.

The applicants prescribed in Paragraph 1 should submit the following documents to the competent authority to apply :

1. Telecommunications Number Application Form
2. A photocopy of the approval letter from the national competent authority for business objectives or the superior authority for each of the government agency (organization) , public welfare group, foundation, incorporated administrative agency or public utility, and a photocopy of the supporting document of the public welfare group, foundation, incorporated administrative agency or public utility
3. Special telecommunications number service plan (including the network architecture, service delivery method, service scope and object, service content and charging method)
4. The relevant documents that the telecommunications enterprise allocated with local line phone numbers and mobile phone numbers agrees to cooperate in the provision of special telecommunications numbers

Those which have been allocated with special telecommunications numbers should not continue to use them when their qualifications are changed or their usage does not comply with the provision of Paragraph 1.

Article 15

The competent authority should consider the following matters when reviewing the application for special telecommunications number allocation prescribed in the previous article :

1. Whether it complies with the PSTN numbering plan
2. Whether it specifies the structure of the subscriber's access to the network and the means and flow of incoming call lines.
3. Whether it specifies the service object and service delivery method, whether the service scope includes the whole country, and whether it specifies the nature of the service and the fee standards of the service objects of each cooperative telecommunication enterprises

Article 16

Each of the telecommunication enterprise' s application for the allocation of the special number is limited to one special number.

Section Four Application for allocation of subscriber numbers 4

Article 17

Only the telecommunications enterprise allocated with signaling point codes may apply to the competent authority for the allocation of subscriber numbers.

Article 18

When a telecommunications enterprise applies to the competent authority for the allocation of subscriber numbers, it shall submit the following documents :

1. Telecommunications Number Application Form
2. Subscriber number usage plan (Subscriber growth forecast data, network structure and capacity planning data)
3. Number of subscribers (exempt for the first-time applicant)
4. Sampling inspection report from an institution with public credibility (exempt for the first-time applicant)

5. Other materials designated by the competent authority

The sampling inspection report from an institution with public credibility prescribed in Subparagraph 4 of the preceding paragraph refers to the sampling verification report of the number of subscribers issued by two persons with the expertise of science, engineering, commerce or management who are registered in the talent database of the Public Construction Commission, Executive Yuan.

Article 19

The competent authority should consider the following matters when reviewing the application for subscriber number allocation prescribed in the previous article :

1. Whether the type of the applied telecommunication numbers is necessary to provide services
2. Whether the number of subscriber numbers reaches the minimum usage standard (Annex 2)
3. Whether it includes subscriber growth forecast for more than three months in the future
4. Whether it specifies the structure of subscribers' access to the network and the connection structure with other telecommunications networks
5. Whether it specifies the brand, model, quantity, capacity and function of the switch
6. Whether it specifies the information on the numbers of subscriber numbers in use for prepaid and postpaid users and outward-ported users, and the information on the subscriber numbers leased to other providers of telecommunications services
7. Whether it determines the effective subscribers based on the subscriber's subscription information and call information, the latest bill, etc., and provides a sampling report from an institution with public credibility, with a 95% statistical confidence level or higher, an error of plus or minus 2%, and the expected value of the effective subscriber ratio being greater than or equal to 0.98

Annex 2 Minimum usage rate of subscriber numbers and calculation method of the quantity to be recovered.pdf

Article 20

The calculation method for the number of allocation for the application of subscriber numbers, the utilization rate of re-application and the application' s quantity limit are as follows :

1. Local line phone number : It takes ten thousand numbers as a unit. For the first-time application, ten units are the cap for each area. The utilization rate should be more than 50% before it can be applied again, with five units as the cap each time.
2. Mobile phone number : It takes a hundred thousand numbers as a unit. For the first-time application, ten units are the cap. The utilization rate should be more than 70% before it can be applied again, with five units as the cap each time.
3. Satellite communication number : It takes ten thousand numbers as a unit. Ten units are the cap for each application. The utilization rate should be more than 70% before it can be applied again.
4. Internet phone number : It takes ten thousand numbers as a unit. For the first-time application, twenty units are the cap. The utilization rate should be more than 70% before it can be applied again, with ten units as the cap each time.
5. Smart virtual number :
 - (1) 010 prefix : It takes a hundred thousand numbers as a unit. The first-time application is limited to one unit. The utilization rate should be more than 80% before it can be applied again, with five units as the cap each time.
 - (2) 020 prefix : It takes ten thousand numbers as a unit. For the first-time application, five units are the cap. The utilization rate should be more than 80% before it can be applied again, with two units as the cap each time.
 - (3) 030 prefix : It takes ten thousand numbers as a unit. Each application is limited to one unit. The utilization rate should be more than 80% before it can be applied again.
 - (4) 050 prefix : It takes ten thousand numbers as a unit. The first-time application is limited to five units. The utilization rate should be more

than 80% before it can be applied again, with two units as the cap each time.

(5) 080 prefix: It takes ten thousand numbers as a unit. The first-time application is limited to three units. The utilization rate should be more than 80% before it can be applied again, with one unit as the cap each time.

(6) 099 prefix: It takes ten thousand numbers as a unit. Each application is limited to ten units. The utilization rate should be more than 80% before it can be applied again.

6. IoT number: It takes a hundred thousand numbers as a unit. For the first-time application, fifty units are the cap. The utilization rate should be more than 70% before it can be applied again, with twenty-five units as the cap each time.

Article 21

If the telecommunications enterprise does not reach the minimum utilization rate of the subscriber numbers set by the competent authority, the competent authority should recover part or all of the subscriber numbers it has been allocated, unless the first-time allocated subscriber numbers have been allocated for less than three years or the re-allocated subscriber numbers have been allocated for less than one year.

The calculation method of the minimum usage rate and the number of recovery of the subscriber numbers prescribed in the preceding paragraph are shown in Annex 2.

The usage rate of subscriber numbers prescribed in Paragraph 1 is calculated based on the use situation on December 31 of the previous year. Annex 2 Minimum usage rate of subscriber numbers and calculation method of the quantity to be recovered.pdf

Chapter Three Telecommunications number usage management

Article 22

The telecommunications enterprise should cooperate with the competent authority to adjust the telecommunications numbers it has been allocated. When a part or all of the business of the telecommunications enterprise terminates, and the competent authority reallocates the subscriber numbers to other telecommunications enterprises, the telecommunications enterprise receiving the allocation should retain the subscriber number for six months for the original subscriber to apply for use, unless they are IoT numbers.

Article 23

The use of telecommunications numbers by telecommunications enterprises should comply with the following regulations:

1. Except for subscriber numbers, telecommunications numbers are not allowed to be leased or lent.
2. The numbers terminated by subscribers should be retained for three months, except for the IoT numbers.
3. The telecommunications enterprise should monthly update the statistics of the leased and lease-terminated subscriber numbers and retain them for at least three months.

The retention period of the subscriber number prescribed in Subparagraph 2 of the preceding paragraph does not apply to those with the consent of the new subscriber.

Article 24

After the telecommunications enterprise allocated with subscriber numbers by the competent authority, it should stipulate the number selection principle of the golden numbers except for the IoT numbers, and report it to the competent authority for reference before implementation; the same should apply to revisions hereof.

The number selection principle prescribed in the preceding paragraph should include the basic number selection principle (as shown in the attached tables); the subscriber numbers included in the number selection principle by the telecommunications enterprise should be provided to subscribers for lease through auction or number selection with a fee.

Tables Basic number selection principles.pdf

Article 25

The telecommunications enterprise allocated with telecommunications numbers should obtain routing information and provide communication services to the called subscribers when its subscribers sending messages.

The preceding obligation shall be determined in accordance with the

provisions of the subparagraphs during the following communication :

1. Long-distance communication: Telecommunications enterprises providing long-distance communication services
2. International telecommunication voice service: Telecommunication enterprises providing international telecommunication services

Article 26

Prior to the telecommunications enterprise assigns subscribers to use telecommunication numbers, they should verify and register subscribers' information.

Article 27

When a telecommunications enterprise leases (lends) subscriber numbers to other telecommunications enterprises to provide telecommunications services, it should not restrict the other telecommunications enterprises from providing number portability services and equal access services to subscribers.

The telecommunications enterprise should obtain an agreement with the other telecommunications enterprise on the implementation of the provisions of Paragraph 1, Article 16 of the Act prior to leasing (lending) the subscriber number to the other telecommunications enterprise.

Chapter Four Supplementary Provisions

Article 28

When the telecommunications enterprise allocated with telecommunications numbers prior to the implementation of the Act applies to the competent authority for the allocation of the originally allocated telecommunications numbers, after it has been registered as a telecommunications enterprise in accordance with the provisions of Articles 5 and 6 of the Act, the following documents shall be submitted:

1. Telecommunications Number Application Form

2. Types and quantity of originally allocated telecommunications numbers

The provisions of Article 7, Article 9, Article 11, Article 13, Article 18 and Article 20 do not apply to the telecommunication numbers applied for allocation in accordance with the provisions of the preceding paragraph.

For the telecommunication numbers applied for allocation in accordance with the provisions of Paragraph 1, the following matters should be considered :

7

1. Whether the applied type of telecommunication numbers type falls in the scope of its services
2. Whether it conforms to the type and quantity of the originally allocated telecommunications numbers

Article 29

The application form prescribed in these Regulations should be announced separately by the competent authority.

Article 30

The Regulations shall be implemented from the date of promulgation of the Act. 8
